What about the price?

- ▶ Before we set the price, we need to know the direction of the design should be. To determine this, we will ask you to answer the following questions.

1. What type of vehicle is it?

We need to know the model and year of manufacture, information whether the vehicle was modified, we would like to see the best pair of photos of the car (plus brief information what exactly was modified in the car).

2. What type of foil is used on the car?

Is it: full foil, digital printing/fullwrap or plot?

3. What design do you expect?

Please send us a few examples of what you like / which direction should we follow / what are your color preferences / will there be any logos, etc.?

We never copy from others!

The best first step is to view our designs, visit our website: www.yagodesign.eu. There you will find a lot of inspirations. Alternatively, you can search other websites.

Once we receive all this information, we will be able to provide a quote, lead times and other conditions.

- ▶ The price always includes:
 - 1 design,
 - 3 modifications,
 - highly-detailed preview of the design,
 - print / plot files,
 - installation guide for the wrapper

Deadline

02

The deadline is most important.

- ▶ We never take on more than we can handle. The design process needs time. And we always have time for you or your customer. That's why we always allocate 3 working days for 1 design. For instance, if we start work on **Monday, the 2nd**, we will deliver final printable files to you on **Wednesday, the 4th**. During this time, we work only on your design, which guarantees that we can complete every project really quickly, meeting all the requirements of our client.

That is why we plan our clients' queue in this way.

03

What about the payment?

- ▶ At the time of accepting the order, we will ask you for a pre-payment to the amount of 50% of the total project value, payable via Pay-Pal (we will create an invoice for you) or by means of a bank transfer (Deutsche Bank IBAN EUR: DE43 1007 0024 0926 7196 05, BIC SWIFT: DEUTDE33HAN30).

After accepting the project we ask for the remaining amount, payable as mentioned above. For the acceptance you have 4 working days. If we do not receive any feedback (either a "yes" or with change requests), the design will be considered as accepted and the remaining amount of the final bill should be paid immediately.

Payment

04

Important details

- ▶ Please remember:
 1. The date of completion and conditions of payment for our services are independent of the wrapping date /printing date/date of delivery of the vehicle.
 2. If we cannot post / publish our work, please let us know and add **100€** to the total price of the project.
 3. The available deadline can be changed only before the pre-payment is made due to a very large number of inquiries.
 4. Problems such as wrong colours or incorrectly-lined up/adjusted parts are the responsibility of the printing house/wrap shop. We kindly ask you to contact your wrap shop/printing house in advance, so that you can have a test print and maybe see examples of wrap shop's work. Have you already selected specific colors? If so, please provide us with specific values of your colors (e.g. CMYK, RGB, PANTONE, RAL etc.), Then we will be able to apply the exact colors of your choice. Otherwise we cannot promise that the printed colors will match your needs.
 5. Please do not compare the printout with the visualizations. They are just visualizations, with lights, shadows and presentation effects. Moreover, they will look differently on different screens, whether on a PC, a tablet or a phone. For comparison, please see the flatprint files (PDF files) and/or a sample print. We always add detailed installation guide to the files - the final result always depends on the accuracy of the wrapper (any problems with the files can always be reported to us before printing / wrapping).

Technical
information

Print files

05

The package with print files

- ▶ Regardless of whether you are a company professional in car wrapping or an end customer we always deliver files ready for printing in **150 Dpi 1:1 scale**, (or vector if needed), divided into appropriate size elements so that they can be conveniently mounted. Our designs are always based on the factory blueprints provided by CCvision. Nevertheless, we always request our customers to confirm all the print dimensions before the actual production, to avoid additional printing costs.
